PROFESSIONAL SUMMARY

Software Engineer with 2 years of experience in Java development, SQL, enterprise application configuration, and software testing. Hands-on experience building Generative AI solutions using MCP servers, RAG pipelines, LLMs, and AI-driven test automation. Strong foundation in backend development, databases, API testing, and enterprise application delivery.

TECHNICAL SKILLS

Generative AI: MCP Servers, RAG, AI Agents, LLM Integration, Prompt Engineering, Claude AI, Claude Code, GitHub Copilot

Programming: Java, C#, .net, Python, JavaScript, SQL

Databases: PostgreSQL, MongoDB, MySQL, query debugging and data validation

Testing & Automation: Selenium WebDriver, Playwright, TestNG, Maven, Functional Testing, Regression Testing, Integration Testing, UAT, Playwright, API Testing, AI-driven E2E Testing

Tools: Jira, Git, Postman

Frontend: React.js, Vite, HTML, CSS

Project Management: JIRA, Zephyr, Agile/Scrum, cross-team communication

PROFESSIONAL EXPERIENCE

Software Engineer I | Alert Enterprise

January 2025 – Present

- Enterprise IAM: Design and maintain Java, Selenium, TestNG, and Maven automation frameworks across enterprise SaaS modules using Page Object Model for scalability and reuse.
- Enterprise Identity and Access Automation Suite- Automated full identity and access lifecycle workflows including onboarding, offboarding, and badge access assignment with fresh test data per execution, eliminating manual file creation.
- AI-Powered Automation: Leveraged AI agents and Generative AI tools to accelerate software testing, test-case generation, and seed-data creation.
- Testing & Validation: Built an end-to-end build verification pipeline that reduced build validation time from 3 to 4 days of manual testing to 3 hours.
- Implementation: Delivered end-to-end technical configurations aligned with enterprise customer requirements and validated data integrity across workflows.

PERSONAL PROJECTS

Database MCP Server

- Built a Database MCP server using Python, MCP, and PostgreSQL.
- Implemented database schema discovery and natural-language-to-SQL generation.
- Added Read-Only and Write permission layers for controlled database access.
- Configured SELECT-only access by default for LLM-generated queries.
- Implemented Human-in-the-Loop approval for CREATE, UPDATE, DELETE, and destructive operations.
- Added SQL injection protection, query timeouts, and result-size limits as security guardrails.

Jira & Google Drive MCP

- Integrated Jira and Google Drive with MCP using Python.

- Built MCP to retrieve requirements mentioned in Jira tickets and Demo Session Google meet notes.
- Connected them to the LLM for context-aware requirement retrieval.
- Enabled AI-assisted requirement analysis using retrieved enterprise context.
- Automated test-case generation from Jira requirements and supporting project documentation.

PDF-Based RAG Pipeline

- Developed a Retrieval-Augmented Generation (RAG) pipeline using Python, PostgreSQL/pgvector, embeddings, and LLMs for question answering over PDF documents.
- Implemented end-to-end document processing including PDF parsing, text chunking, embedding generation, vector storage, and semantic similarity retrieval.
- Built grounded response generation by retrieving relevant document context and supplying it to LLMs, improving answer relevance and reducing unsupported responses.

EDUCATION

Bachelor of Engineering in Computer Science | Chandigarh University, Mohali, India | 2025

CERTIFICATIONS & TRAINING

-
- Retrieval-Augmented Generation for Enhanced AI Outputs — IBM SkillsBuild
 - Generative AI Certification — Google Skills
 - Claude Partner Network Learning Path — Anthropic
